Clinical Support Division

Special Needs Program Management Information System (SNPMIS)

What It Is…

SNPMIS — Special care for special needs

SNPMIS is a Military Health System standard system used by Navy, Army and Air Force military treatment facilities. It ensures Department of Defense compliance with the Individuals with Disabilities Education Act and is the database required to track special needs children of TRICARE beneficiaries.

Key Features and Benefits

➢ Captures and records referral, evaluation, eligibility and service plan data

➢ Identifies and delivers services to those who actually qualify

➢ Tracks services provided during each child's evaluation

➢ Makes it convenient for Education and Developmental Intervention Services to deliver care

➢ Supplies access to a comprehensive therapy, medical support and social services

Highlights

➢ The Business Objects (BO) version 6.5.1 currently being used in conjunction with the SNPMIS application is moving to the Internet. DHSS has established the BOXI Common Services (BCS) environment which uses Business Objects XI (BOXI), the latest version of the BO reporting tool available. The BCS site is CAC-enabled to provide necessary site security. The SNPMIS reports, created using BO 6.5.1, have been converted to the BOXI format. The BCS site will allow authorized SNPMIS users to create new reports.

➢ Upcoming technical refresh will enable PKI and User Based Enforcement (UBE) which will eliminate usernames and passwords. The system will also become Internet Protocol version 6 (IPV6) compatible.

What Users Are Saying…

"Seldom down and rapid response from MHS when the system does go down."

"I am able to aggregate data and prepare reports from SNPMIS with ease."

"SNPMIS is a dynamic system that is improving with each upgrade. Compared to other systems…it is far superior."

"Functional, ease of use as compared to other data management systems."
